Kids In Need Of Dentistry

Many of you know that Kids in Need of Dentistry or KIND, is one of Dr. Lovato's favorite organizations. Every February, Dr. Lovato has volunteered here in honor of National Children's Dental Health Month. KIND is a local non-profit organization that has been providing dental services to children in need since 1912. With the help of volunteers at their 2 Denver locations and 1 location in Colorado Springs, hundreds of children receive dental care at a cost their family can afford. This year Dr. Lovato and Kyla both volunteered and had a great time educating kids on healthy dental habits. Our office is a proud supporter of KIND and all the work they do. If you would like more information about KIND please visit their [website](#).

How Are We Doing?

Providing superior care, one patient at a time is our mantra and we live everyday with that goal. So, how are we doing? We would love to hear about your positive experiences at our office.

If you have a minute and want to tell the world why your dentist is the best in town, please write us a review! We know how busy life is so we are making it easier than ever to give Dr. Lovato 5 stars. After your next appointment you will receive an email with links to review sites like Google and Rate A Biz.

We are growing our practice and reviews will help let those in need of superior dental care, know who we are.

Thank you to everyone who has already posted reviews of our practice! It means the world to us knowing we are exceeding your dental needs!

The Learning Never Ends

The more that you read, the more you will know. The more that you learn, the more places you'll go. ~Dr. Seuss

Dentistry is an ever changing and evolving profession and Dr. Lovato doesn't want to fall behind. Staying in the forefront of dental technology and technique is a top priority for him. To stay on the top of his game Dr. Lovato attends dental seminars, conferences, and participates in study groups. Recently, Dr. Lovato has learned about 3D printing and how that can revolutionize the dental field. Advances in digital dentistry with regards to tooth restoration, implant supported restorations, and dentures are the wave of the future!

Dr. Lovato also attended the 2018 American Academy of Restorative Dentistry last month. He was excited to learn more about SFOT (surgically facilitated orthodontic treatment), a new technique to develop and manipulate the bone structure that supports teeth. Dr. Lovato also studied new minimally invasive restorative treatments. Making common procedures like fillings and crowns less invasive on patients is only the beginning in dental advancements. We can't wait to see

how else dentistry, our practice, and our procedures evolve!

What to Know About Gum Disease

Gingivitis, periodontitis, chronic periodontal disease; gum disease has many names but no positive outcomes. Gum disease is an infection of the tissues that surround and support your teeth. It is a sneaky disease that is painless in early stages which makes it hard to detect without regular dental checkups. Gingivitis, the beginning stage of gum disease, is still reversible. A professional cleaning and a good brushing and flossing routine can bring your gums back to full health. If ignored, gingivitis will advance into periodontal disease with tissue and bone loss. 47% of adults over 30 suffer from chronic periodontitis. This stage of gum disease often results in tooth loss. The good news is, gum disease is completely preventable. Schedule regular dental cleanings and practice good oral care to keep gums healthy and disease free.

Common symptoms of gum disease

- gums that bleed easily
- red, swollen, tender gums
- gums that have pulled away from the teeth
- persistent bad breath or bad taste
- permanent teeth that are loose or separating

Common causes of gum disease

- poor oral hygiene
- smoking or chewing tobacco
- genetics
- crooked teeth that are hard to keep clean
- pregnancy
- diabetes
- Some medications
